

FROM ALGORITHMIC SUBCULTURES TO POST- PANDEMIC MEDIA NORMS:

HOW DIGITAL PLATFORMS
RECONFIGURE CULTURAL
CONSUMPTION AFTER COVID-19

The slide features a decorative background. On the left side, there are large, overlapping triangles in shades of magenta and grey, some filled with horizontal or vertical line patterns. The right side of the slide is dominated by a complex, multi-colored network graph with nodes and edges in shades of purple, blue, and grey, creating a starburst-like effect.

BACKGROUND: ALGORITHMIC CULTURES

- Fragmented micro-communities
- Algorithmic clustering
- Exclusion of AI-generated music from “authentic” communities
- Tag standardization as a way to “speak the algorithm’s language”

In musical subcultures, platforms shape not only what audiences see but how creators behave.

PANDEMIC AS A TURNING POINT FOR MEDIA CONSUMPTION

- Covid normalized platform logics: personalization, on-demand habits.
- Shift toward digital news, data-driven cultural access.
- Exhibitions, bookings, and cultural participation reconfig

HYPOTHESIS AND QUESTIONS

- Did the Covid-19 crisis normalize algorithmic cultural consumption across society?
- How have legacy media adopted (or failed to adopt) platform logic?
- What parallels exist between digital music subcultures and the post-pandemic media landscape?
- Is old media really “dying” — or converging toward the platform model?

METHODOLOGY

Mixed methods

- Quantitative approach
 - Platform data extraction (YouTube and Twitter APIs, Spotify public data)
 - Mapping consumption networks(Gephi, Rstudios)
- Qualitative component:
 - interviews: journalists, musicians, digital curators
 - Pre/post Covid literature review comparison(2018–2025)

The background of the slide is a vibrant magenta. On the left side, there is a vertical strip containing several abstract elements: a satellite image of a coastline, a series of concentric white circles, a series of parallel white lines, and a series of concentric white squares. A white line with a dot at its end extends from the top left towards the center. The main title is in large, bold, white capital letters.

COMPARATIVE QUESTION OF THE PROJECT

How similar are the mechanisms that structure digital-born subcultures and the post-Covid shifts in “old” media consumption?

CONCLUSION

Covid did not “kill” old media — it forced them to operate under the same algorithmic logic already shaping digital subcultures.

An abstract geometric design on the left side of the slide. It features a dark blue background with various geometric shapes and patterns. A white circle is positioned near the top left. Below it, a light blue semi-circle is visible. To the right of the semi-circle, there is a pink triangle with diagonal lines. Further down, there is a pink square with a pattern of concentric lines. At the bottom, there is a pink triangle with a pattern of concentric lines. The design is composed of various shades of blue, pink, and white.

THANK YOU

Any questions ?
